Technical Information

Office 365 Dashboard Information	
Test User Credentials for your institutional Office 365 administrator account	
Test User 1	
Username:	
Password	
Test User 2	
Username	
Password	
Configuration Parameters Required	
Office 365 URL This URL is a direct link (end point URL) to the exchange web services from where emails are fetched e.g. https://ch1prd0106.outlook.com/EWS/Exchange.asmx	
Email Base URL It is a URL used to invoke the email client applications e.g. https://ch1prd0106.outlook.com/owa/	
Email Domain Email domain is a unique identifier that recognizes the server to which mails should be fetched	

Unifyed – O365 Dashboard Discovery Document

e.g. @uni.xxx.edu.au	
Append Email Domain (Yes/No)? Choose Yes if you would like every email to be appended with your email domain above	
Service Account (email) It is an impersonation account, which has the rights to impersonate other accounts	
Service Account Password (if any) Password to the service account	
Encryption Key Can be anything to encrypt password. Service Account Password is encrypted/ decrypted with this key	
Proxy Host (if any) If Mail Domain access requires any proxy setting then we can add this; otherwise it is not required	
Proxy Port (if any) The proxy port number	
SSO URL It is the URL of SSO in general. It is the URL of QuickLaunch that is configured for SSO with Live@Edu	
SSO Timeout (if any) It is the time (in milliseconds) taken to invoke the deep link email URL	

Prerequisites for Office 365 Dashboard Implementation

The following are the prerequisites for a successful implementation of the Office 365 Dashboard module:

1. The Office 365 Dashboard is only supported for Unifyed 7.2 and above. For earlier versions of Unifyed, a technical feasibility check may be required.
2. For the Office 365 Dashboard to work seamlessly, CASification of ADFS & Single Sign-On to Microsoft® Office365 with CASified ADFS is required
3. Following are some of the assumptions for a successful CASification of ADFS & SSO to Office365 configuration with CASified ADFS:
 - a. In Production, Certificates must be trusted certificates on CAS and ADFS servers.
 - b. Both will share same user details from AD.

NOTE: This list only serves as an initial guide to the type of information that will be required and must not be treated as an exhaustive list.
